Mixed-Use Residential – Live/Work Housing Model

Concept

This mixed-use residential project proposes a low-density, coastal live-work model in Pacifica, CA, integrating housing, retail, and community-based enterprise within a single footprint.

The building is structured to support resident-led commercial activity, where occupants participate in the operation or ownership of ground-floor businesses, creating a resident-driven economic ecosystem.

Managed through a nonprofit framework, the project prioritizes long-term stability, accessibility, and pathways to ownership while maintaining a scale appropriate to the coastal context.

Savor Restaurant Renderings

Main Dining - Ocean-facing

- The anchor restaurant is organized with clear front- and back-of-house zoning, supporting efficient circulation and direct service flow.

Service Station - Server handoff

Bar - Service anchor

1144 Clairpoint Way, Pacifica, CA

Savor Restaurant Plan

Floor Plan

- Kitchen, prep, dish, and service areas are organized as distinct but adjacent work zones, minimizing cross-traffic while maintaining direct functional relationships.
- Dining layouts support flexible seating arrangements, while maintaining clear service paths and visual connection to the ocean-facing frontage.

Apartment Renderings

Dining - Ocean views

- Units are oriented to maximize ocean views, natural light, and storage, with open living areas anchored by kitchen islands.

Kitchen - Island-centered layout

Living - Open plan with view corridor

Apartment Floor Plans

Two Bedroom

Three Bedroom

One Bedroom

- Layouts are developed within a consistent structural framework, demonstrating flexibility and efficiency across all three unit types.
- The residential units are designed to provide spacious, light-filled living environments within a compact footprint.
- All primary living spaces and bedrooms are provided with access to natural light and ventilation, reinforcing both comfort and livability.

Proposed Kitchen Plan

Custom Hood Box: Crown molding, box, and trim.
27" x 96" panel for the box.
3 1/2" crown molding for the hood insert frame.
4 1/2" toe kick for trim detail.
**SEE DETAIL ON NEXT PAGE

3" Fillers in both corners of 30" Blind Corner Cabinets.
Install the cabinets 3" pulled from the wall.

Add fillers to sides of box, flush with cabinets.

Custom Range Wall Elevation

- Kitchen remodel focused on improving circulation, storage, and usability within an existing footprint.
- A 9-foot island anchors the space, providing seating, prep area, and additional storage while maintaining clear movement between zones.

Bathroom Remodel Documentation

Proposed Bathroom Plan

- Bathroom remodel balancing openness and privacy within a compact footprint.
- A partial partition replaces a full water closet to maintain visual continuity while defining zones. Dual vanities and a walk-in shower improve function and comfort.
- Material selections reference traditional patterns while using durable, contemporary finishes.

Condo Remodel Documentation

Proposed Floor Plan

- The layout replaces a compartmentalized kitchen with an open plan anchored by a central island, while reorganizing the bedroom and bathroom zones to create a more functional primary suite.

Exterior Elevations

- Two-bedroom remodel focused on improving circulation, storage, and spatial clarity within an existing footprint.
- Strategic additions, including direct garage access, increased storage, and new openings for light and ventilation, improve both usability and livability.

Shower Rendering

- Designed a multi-user primary bathroom within a constrained footprint with dual entries and structural interruptions
- Organized circulation to allow simultaneous use of shower, water closet, and vanity zones
- Integrated dual shower, soaking tub, double vanity, and dedicated makeup area without compromising flow
- Balances complex functional planning with a cohesive, light-driven material palette

NOTES

See notes on Page 6.

Proposed Bathroom Plan

Kitchen Remodel Documentation

Scope

Kitchen remodel focused on maximizing function and visual impact within a compact footprint.

A seven-foot island was introduced as the central organizing element, providing additional storage, a secondary sink, and seating for four with integrated, space-saving solutions.

The layout was carefully reconfigured to maintain clear circulation while opening sightlines toward the surrounding views, creating a brighter and more expansive feel.

A subtle 1960s-inspired material palette was incorporated through tile and finishes, balancing character with a refined, contemporary execution.

The design delivers a high-end result through efficient planning and material selection.
